

Assignment II

Problem statement:

- Re-create the attached design (dashboard.jpg) using html, css and javascript(preferably **ReactJs**) for **mobile devices**. (use mobile first approach).
- Use some **dummy API** to fetch data to render the page. (see [github jobs api](#))
- Use assets attached in the folder.

We are testing for **code quality, attention to detail, responsiveness**.

Feel free to revert in case of any questions.

Submission Guidelines:

- Zip the project.
- Add readme file clearly mentioning steps to run the code.
